

Electronic Trading Solutions for Corporate and Institutional Clients

Sucden Financial has a range of electronic access solutions tailored to each client's individual requirements. The company also supports **Direct FIX** connectivity and can support selected high end **ISV** execution systems.

Trading system	Key products covered	
STAR	Futures and Options	Sucden Financial's in-house developed Futures and Options trading platform.
STORM	Futures, Options, Equities, CFDs	Multi-market trading system with advanced features.
Sucden FX Trader Currenex	Foreign Exchange	Sucden FX Trader Pro and Currenex are the preferred desktop platforms which are free to access and easy to deploy.

STAR

Sucden Financial's in-house developed Futures and Options trading platform provides access to many of the world's major exchanges, including the London Metal Exchange (LME).

STAR is used by a very broad range of our global clients, including Corporates, Brokers, Proprietary Trading Houses and Hedge Funds as well as many of our internal execution desks.

STORM

Sucden Financial's multi-asset class trading platform offers equities, CFDs, futures and options with global exchange connectivity. The platform incorporates flexible trading functionalities that can be tailored to each individual trader's style and preferences. All styles from simple "click and trade" to portfolio, algorithmic and spread trading can be accommodated.

Connectivity is possible to all of the world's major global exchanges and the platform provides advanced trading functionality, incorporating a wide range of algorithmic trading strategies and inter and intra market spread trading capabilities.

Electronic Trading – Foreign Exchange

There is a well established electronic offering for FX clients based on our policy of offering competitive multi-provider liquidity across a selection of industry leading platforms.

Sucden FX Trader Pro and Currenex are the preferred desktop platforms which are free to access and easy to deploy.

In addition we are able to stream prices through our API to those clients who have their own execution systems.

Direct FIX Connectivity

The FIX API enables clients to connect to Sucden Financial's electronic trading architecture using the industry-standard Financial Information eXchange (FIX) messaging protocol.

This allows order management systems, black box models and third-party execution management systems to easily connect to our infrastructure for direct market access and algorithmic execution. In addition Sucden Financial's Institutional Business Development desk can assist clients in creating customised solutions for straight through processing.

Sucden Financial currently supports the 4.2, 4.3 and 4.4 versions of FIX.

ISVs

In addition to Sucden Financial's trading systems and our FIX connectivity, we support selected high end ISV execution systems. Please contact the electronic sales team to discuss your requirements for this area.
